Performance Testing

Date	15 March 2026
Team ID	xxxxxx
Project Name	Smart-Lender
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman, Flask Local Server
Type of Testing	Load Testing, Functional Testing
Target Module / API	Loan Prediction Module (/predict)
Test Environment	Local Machine (Windows, Flask)
Test Date	15 March 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Submit valid loan details	1	30	Loan prediction displayed successfully
2	Submit invalid input	1	60	Validation error shown
3	Multiple prediction requests	10	20	System responds without failure
4	Refresh and reuse application	5	30	Application remains stable

A SmartBridge Product

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.2 sec	Pass	Fast response
2	Response Time (Max)	< 5 seconds	**2.8 sec**	Pass	Within limit
3	Throughput (Req/sec)		22 Req/sec	Pass	Stable performance
4	Error Rate	< 1%	0%	Pass	No errors observed
5	CPU Utilization	< 80%	45%	Pass	Normal usage
6	Memory Utilization	< 80%	55%	Pass	Efficient memory usage

Step 4: Observations & Analysis

Key Findings:

[Describe what the test results revealed about your system's performance]

Bottlenecks Identified:

[List any performance bottlenecks observed during testing]

Optimization Steps Taken:

[Describe any changes or optimizations made to improve performance]

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

[Insert Screenshot 1 here]
