

Solution Requirements

Date	25 May 2026
Team ID	XXXXXX
Project Name	Smart Lender – AI Loan Approval Prediction System
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>Secure user login.</i>	High
2	Authorization levels	<i>Role-based user access.</i>	High
3	External interfaces	<i>Connect with ML model and dataset.</i>	High
4	Transactions processing	<i>Process loan applications and generate predictions.</i>	High

5	Reporting	<i>Display prediction results and reports.</i>	Medium
6	Business rules, etc.	<i>Predict loans based on applicant details.</i>	High
7	Compliance to laws or regulations	<i>Protect user and financial data.</i>	Medium
8	<i>Other</i>	<i>Provide an easy-to-use interface.</i>	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	<i>Fast prediction response.</i>	<i>Less than 2 seconds</i>
2	Scalability	<i>Handle more users and applications.</i>	<i>1000+ applications/day</i>
3	Security & Data Privacy	<i>Secure user information</i>	<i>Encrypted data & secure login</i>

4	Reliability & Availability	<i>Ensure continuous availability.</i>	<i>99.9% uptime</i>
5	Usability & Accessibility	<i>Easy and responsive interface</i>	<i>User-friendly design</i>
6	<i>Other</i>	<i>Easy to update and maintain.</i>	Modular architecture
